An electronic signature, or e-signature, is an electronic indication of intent to agree to or approve the contents of a document. A digital signature is a type of electronic signature. Digital signatures are based on a specific technology that enables users to ensure the authenticity of the signer and to trust that a signature is valid through the use of digital certificates and a public and private key pair. Each electronic signature is unique, documentable, encrypted, and tamper-evident. DocuSign eSignatures are valid and legally binding and help us comply with the U.S. Federal ESIGN Act and UETA Act, the two Acts that establish the legality of electronic signatures in the United States. Both ESIGN and UETA establish that electronic records and signatures carry the same weight and legal effect as traditional paper documents. DocuSign eSignatures offer bank-grade security and operations. DocuSign guarantees the confidentiality of all transactions and provides multi-faceted verification of signing event. *With DocuSign's mobile app you can prepare and send documents for signature, complete in-person signing, and get instant visibility into your document status directly from your smartphone or tablet.
